● **Research Experience**

Master Researcher | Xiamen University

- **Topic 1:** *Security and robustness of AI algorithms* Feb. 2023 – Feb. 2025
Description: This research reveals how attackers can subtly and efficiently alter AI outputs, like image captioning and 3DGS watermarking, without internal model access.
- Topic 2:** *Interpretability and fairness of AI algorithms* Sep. 2022 – Feb. 2024
Description: This research underscores the need for fairness in ML, examining how subgraph patterns cause bias in GNNs and suggesting mitigation strategies for ML practitioners.

Bachelor Researcher | Guangzhou University of Chinese Medicine

- **Topic 3:** *AI algorithms for clinical tumor characterization* Sep. 2020 – Jun. 2022
Description: This study reveals the limits of standard DWI and DCE-MRI models in tumor analysis and proposes a spatiotemporal-attention AI for direct prediction.
